# Your ~ Fireplace

HERE is today a constantly increasing appreciation of the comforts and delights of the open fire, for the fireplace has ever been the center of the home and it is around the hearth that the family gathers to enjoy the cheerful glow of the crackling log fire.

The equipment of the fireplace should be as attractive as the furnishings of your room. All too frequently the effect of an otherwise attractive fireplace is almost ruined by the use in it of andirons of inappropriate character or of wrong proportions.

A collection of authentic designs of such variety and unusual interest as we have to offer, makes it a comparatively simple matter to secure what is desirable.

The designs in this booklet have not been arranged with any regard to size, for although the general rule is that andirons should be about two thirds the height of the fire opening, so many variations are permissible that to attempt to classify them in this way might be misleading.

We shall be only too glad to lend our assistance in making selections, if you will send us the size and character of your fireplace and indicate the type of design which you prefer.
